2024 Child Restraint Survey Final Report

Prepared for: Florida Department of Transportation State Safety Office

Prepared by: Preusser Research Group, Inc.

June 2024

Protecting Children Riding in Passenger Vehicles

Child safety seats have been shown to reduce fatal injury by 71 percent for infants (under 1-year old) and by 54 percent for toddlers (1 through 3 years old) in passenger cars. The corresponding reductions in light trucks are 58 percent and 59 percent, respectively. Among children under 5 years old, an estimated 352 lives were saved nationwide in 2017 by restraint use (National Highway Traffic Safety Administration [NHTSA], 2019).

Data also shows that older children and adults alike are far more likely to survive a severe crash with less injury when wearing a safety belt (Centers for Disease Control [CDC], 2017).

Florida's Child Restraint Laws

Florida law (Florida Statute 316.613) requires that children 5 years of age or younger must be properly restrained no matter where they are sitting in the vehicle. Children through age 3 must be secured in a separate carrier or a vehicle manufacturer's integrated child safety seat. For children ages 4 through 5 years, a separate carrier, an integrated child safety seat, or a safety belt may be used.

Child safety experts recommend that children aged 12 and under should ride properly buckled in the back seat. Airbags can kill young children riding in the front seat. A rear facing car seat should never be used in the front seat or in front of an airbag.

Types of Restraint

Type of restraint is determined based on age, weight, and height of the child. The device manufacturer provides directions that should be followed.

Information on types of restraint and experts who can help answer questions on proper seats and correct installation can be located at the Florida Occupant Protection Resource Center's web portal:

https://www.floridaoprc.ce.ufl.edu/oprc

FLORIDA LAW PROTECTING CHILD PASSENGERS

Statute 316.613

Florida law requires all children from birth through age 3 be placed in a restraint device that is a separate carrier or a vehicle manufacturer's integrated car seat.

Florida law requires all children 4 through 5 years of age to ride in a separate carrier, an integrated child seat or child booster seat, or safety belt.

The Florida Department of Transportation and the Florida Department of Highway Safety and Motor Vehicles recommends keeping children ages 12 and under in the back seat.

What is the fine for a child restraint violation? Fines start at \$60.00 and 3 points, but the dollar amount can vary by local jurisdiction.

2017-2024 Child Observational Surveys

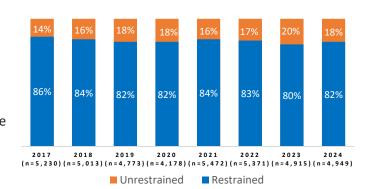

The Florida Department of Transportation (FDOT) contracting with Preusser Research Group, Inc. (PRG) developed and conducted an observational survey during the Spring of 2017 that estimated child restraint use across the state of Florida. The survey included one-hour observation periods across 200 distinct sites. The sites were spread across 20 counties (10 per county). The 20 counties covered the 10 television/radio Designated Market Areas (DMA) serving the State of Florida. The two most populated counties in each DMA were selected. PRG replicated the survey in the Springs of 2018 and 2019. For 2020, due to COVID-19, the survey was conducted in July. In 2021, data collection reverted back to the Spring timeframe (March/April). Data collection also took place over March and April for the 2022, 2023, and 2024 surveys.

Trained data collectors¹ were positioned near daycare centers, shopping centers, recreational areas, and fast-food restaurants. These sites were selected to maximize the number of children in the vehicles observed. The data collected included: types of child restraint used in rear and front seats; estimated age of child passenger(s) (ages: 0-3; 4-5; 6-12); driver characteristics (sex, age, race); and vehicle type (car, SUV, pickup, van). A copy of the data collection form used by observers is appended to this Final Report.

2024 Survey Results

Observers collected usage data on 4,949 children riding in 4,413 passenger vehicles. In most cases, information was collected on 1 child per vehicle. However, observers could collect information on up to 2 children. The survey results indicated that 82 percent (+/-1.07; 95% confidence) of children, ages 0-12, were restrained across the state of Florida. The observed rate in 2024 was 2 percentage points higher than the previous year (2023; 80%). The highest rate was measured in 2017 (86%).

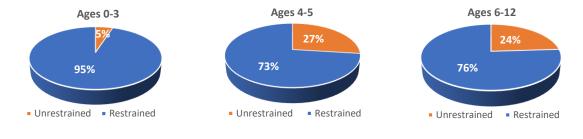

CHILD RESTRAINT USAGE FOR YEARS 2017–2024

Usage by Age Category

Observers also estimated an age category for almost all of the observed children (4,947 out of 4,949). As usual, the survey results indicated that youngest children (ages 0-3; n=1,820) were restrained most often (95%). Also similar to past measures, children ages 4 to 5 (n=892) were restrained least often (73%). Older children (ages 6-12; n=2,235) were observed restrained 76 percent of the time.

2024 RESTRAINT USAGE BY AGE CATEGORY

¹ Preusser Research Group, Inc. employees.

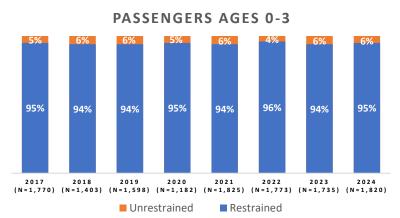

The graphs to the right show observed use by age category comparing survey years 2017 through 2024. The percentages displayed in orange represent unrestrained children and the percentages in blue represent the proportion restrained.

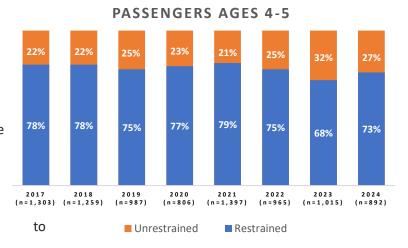

The top graph displays usage among child passengers ages 0-3. Children in this age group should be restrained in rear-facing carriers or forward-facing car seats depending on age, weight, and height. Survey results indicate that children observed in this age group were most often restrained with little difference in the proportion restrained year-to-year.

The middle graph displays usage among child passengers ages 4-5. Children in this age group are typically beyond the weight and height of children who should use rear facing carriers. Some are beyond forward-facing car seats too, and using a booster seat would be most appropriate. This age group is far less likely to be restrained compared to the younger children. After reaching a high of 79 percent usage in 2021, this rate fell 4 percentage points to 75 percent in 2022 and a further 7 points to 68 percent in 2023, before recovering 73 percent in 2024.

The bottom graph shows usage among child passengers ages 6-12. The younger children in this age group are, by and large, the appropriate size for booster seats, while older children have grown to the appropriate size for safety belts. Children in this age group typically had higher usage than those ages 4-5, however year-to-year comparisons show that usage is decreasing downward over time (from 84% in 2017, to 75% in 2023 and 76% in 2024).

RESTRAINT USE BY AGE CATEGORY FOR YEARS 2017–2024

PASSENGERS AGES 6-12 16% 19% 23% 22% 22% 23% 25% 24% 84% 81% 77% 78% 78% 77% 75% 76% 2017 (n=2,072) (n=2,341) (n=2,182) (n=2,176) (n=2,244) (n=2,633) (n=2,151) (n=2,235) Unrestrained Restrained

Observed restraint type by age category indicates that children, by and large, use the proper restraint type when restrained. It is important to note that an unobtrusive, observational survey like the one presented here cannot tell if a child is *correctly* using a child safety seat or booster seat. Also, there may be cases where booster seat usage is recorded as "seat belted" due to not detecting a backless booster seat.

2024 RESTRAINT TYPE/USE BY AGE CATEGORY

		Ages 0-3 (n=1,820)	Ages 4-5 (n=892)	Ages 6-12 (n=2,235)	Ages 0-12 (n=4,947) *
	Rear-Facing Carrier	31% (n=568)	1% (n=6)	0% (n=0)	12% (n=574)
	Forward- Facing Car Seat	63% (n=1,143)	33% (n=296)	1% (n=20)	29% (n=1,459)
25.	Booster Seat	0% (n=2)	32% (n=282)	4% (n=93)	8% (n=377)
-	Vehicle Safety Belt	0% (n=9)	8% (n=68)	71% (n=1,578)	33% (n=1,655)
0	No Restraint Used	5% (n=98)	27% (n=240)	24% (n=544)	18% (n=882)

^{*}the 2 children with no age designation are excluded from this column

Where are Children Positioned and How is that Associated with Restraint Use?

This is the eighth year examining this association, and most findings hold true year after year with similar proportions. Younger children tend to be in the back seat, but as they grow older they begin to migrate into the front of the vehicle. The following diagram shows the ratio of children observed in the front and back seats of passenger vehicles and shows restraint use in the front versus the rear. The survey found nearly all (99%) of passengers between the ages 0-3 rode in the rear seats, and most (95%) were restrained. Restraint use was much lower (67%) for the few (n=15) observed in the front. Children ages 4-5 were still riding in the rear seat, by and large (97%), but restraint use was much lower (77%) compared to younger years. Usage in the front seat was also lower for this age group (67%). Older children ages 6-12 had more representation in the front compared to younger children, but most still rode in the rear. Restraint use measured higher for this age group when observed in the **front** compared to riding in the rear (87% versus 68%).

2024 SEATING POSITION AND RESTRAINT USE

	% In a REAR Seat % Restrained	% In the FRONT Seat % Restrained
Ages 0-3	99% (n=1,802) 95%	1% (n=15) 67%
Ages 4-5	97% (n=823) 77%	3% (n=27) 67%
Ages 6-12	62% (n=1,394) 68%	38% (n=847) 87%
Total*	4,019	889

^{*}Table includes passengers whose age, seating position, and restraint use were all recorded (n=4,908). Restraint use, age, and positional observations marked 'unknown' were removed.

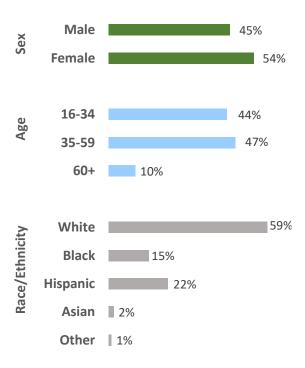

Characteristics of Drivers with Children

The 2024 survey found the characteristics of **drivers** with children to be similar to previous surveys. These drivers were more often female (54%, n=2,392) than male (45%, n=2,004); rarely was the sex of the driver not determined (0.4%, n=17).

Children were most likely with drivers between the ages of 35-59 (47%, n=2,054) followed by drivers between the ages 16-34 (44%, n=1,928). Children least often appeared with drivers 60 years and older (10%, n=426). Rarely was the age range of driver not determined (0.1%, n=5).

The observers also coded perceived race/ethnicity of drivers with children in the vehicle. Of those, fiftynine percent were coded as White (n=2,614); 15 percent Black (n=679); 22 percent Hispanic (n=982); 2 percent Asian (n=67), and 1 percent Other (n=66). Again, rarely was driver race/ethnicity not determined (0.1% unknown, n=5).

2024 DRIVER CHARACTERISTICS

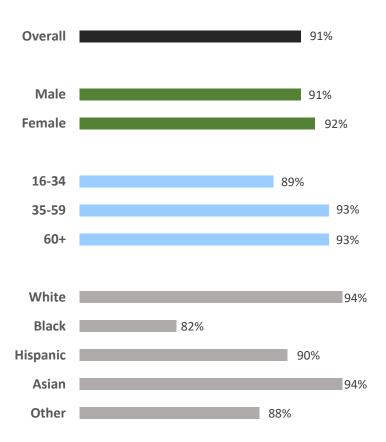

Driver Belt Use

The 2024 survey results found that 91 percent of the drivers transporting children were belted (based on n=4,380 drivers with known safety belt usage). Driver usage was slightly higher compared to the 2023 and 2019 surveys (90%), same as in 2021, 2020, and 2018 (91%), and slightly lower than the 2017 (92%) survey.

Driver characteristics were associated with varying belt usage. Female drivers (n=2,377) were belted only slightly more often than male drivers (n=1,989; 92% versus 91%, respectively). Drivers 60 years and older (n=425) as well as drivers between the ages of 35-59 (n=2050) were belted most often at 93 percent. Drivers 16-34 were belted the least (n=1,902) at 89 percent. The survey indicated some differences in belt use by Race/Ethnicity. Asian drivers (n=67) and White drivers were belted most often (94%), while Hispanic drivers (n=968) were buckled 90 percent of the time. Black drivers (n=671) were belted only 82 percent of the time. Drivers with race coded "Other" (n=66) were belted 88 percent of the time.

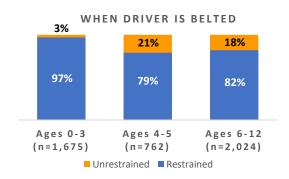

2024 DRIVER BELT USE

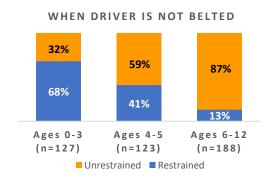

How is Driver Belt Use Related to Child Restraint Use?

Driver belt use is clearly associated with child restraint usage. A child was far less likely to be restrained when a driver was <u>not</u> belted. The 2024 survey indicated children ages 6-12 were least likely restrained with an unbuckled driver (only 13% using restraint) followed by children ages 4-5 (only 41% using restraint). Even the youngest passengers (ages 0-3) were *unrestrained* at an alarming rate of 32 percent when the driver was not belted. Decreased safety belt usage among unrestrained drivers with children should raise concern.

2024 RESTRAINT USE BY AGE CATEGORY

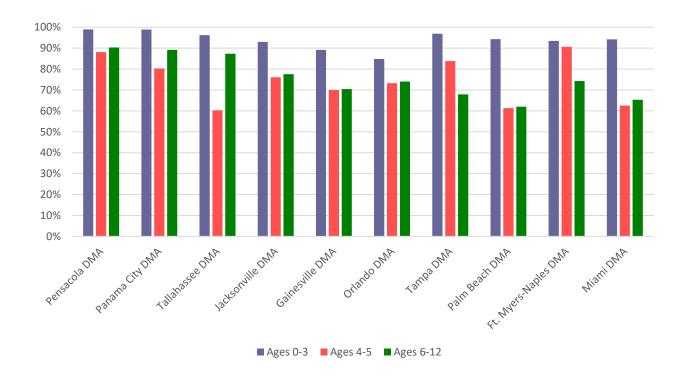

Designated Market Area

Single year results presented by DMA should be viewed with some level of caution due to the likelihood of a low number of child passengers observed. Combining multiple years of data provides more stability and confidence in the results.

The figure below shows usage rates using combined data for the most recent five years of data, **2020-2024**. The graph separates the results for the ten DMAs. The different colored bars represent usage by individual age categories in each of those DMAs. The bars indicate there is some uniformity across DMAs regarding the age categories. For example, in each DMA, usage is higher among child passengers ages 0-3 compared to any other age category. Usage is lowest among passengers ages 4-5 in seven of the DMAs; in two others, the 6-12 age group represents the lowest usage.²

RESTRAINT USE BY AGE CATEGORY AND DESIGNATED MARKET AREA (DMA) FIVE YEAR AVERAGE (2020 - 2024)

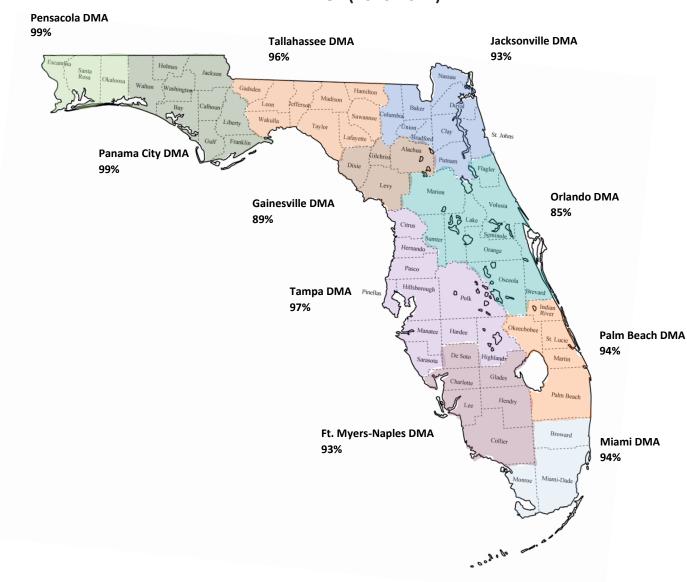

² In the Gainesville DMA, usage was 70% for both the 4-5 and the 6-12 age groups.

Ages 0-3; Restraint Use by DMA

The figure that follows shows the usage rate for children ages 0-3 by DMA. Again, the rates presented were determined using five years of data (2020–2024) with each year (and each county in a DMA) given equal weight. As previously explained, using multiple years of data helps to provide stability and confidence in the estimated rates. Restraint usage for ages 0-3 ranged from 85 percent to 99 percent across the DMAs. Four of the ten DMAs posted usage rates at or above 95 percent (Panama City, Pensacola, Tallahassee, and Tampa). Four more DMAs posted 93 and 94 percent rates (Fort Myers, Jacksonville, Miami and Palm Beach). Usage was lowest in the Orlando DMA (85%).

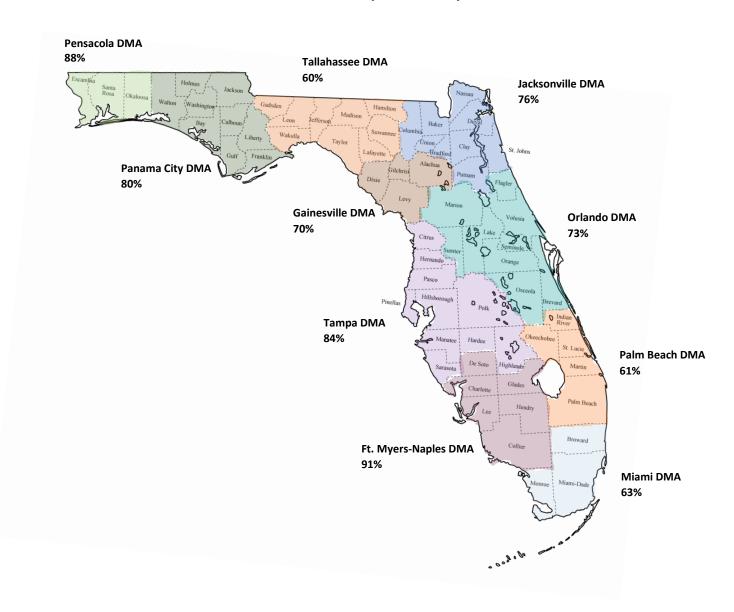

AGES 0-3
CHILD RESTRAINT USE BY DESIGNATED MARKET AREA (DMA)
FIVE YEAR AVERAGE (2020-2024)

Ages 4-5; Restraint Use by DMA

The next figure shows the usage rate for children ages 4-5 by DMA. Again, the rates were determined using five years of data (2020–2024). Restraint use among this age group is universally lower compared to other age categories in the DMAs. Usage among passengers in this age category ranged from 60 percent to 91 percent; the same range as last year's five-year average even with the annual increase in usage for this age group. It is important to note here, that the broad range in usage rates across the DMAs is due, at least partially, to the low number of observations of four and five-year-old passengers. Still, the fact remains, passengers in this age category are restrained less often compared to the youngest age group and that is true across the entire State of Florida.

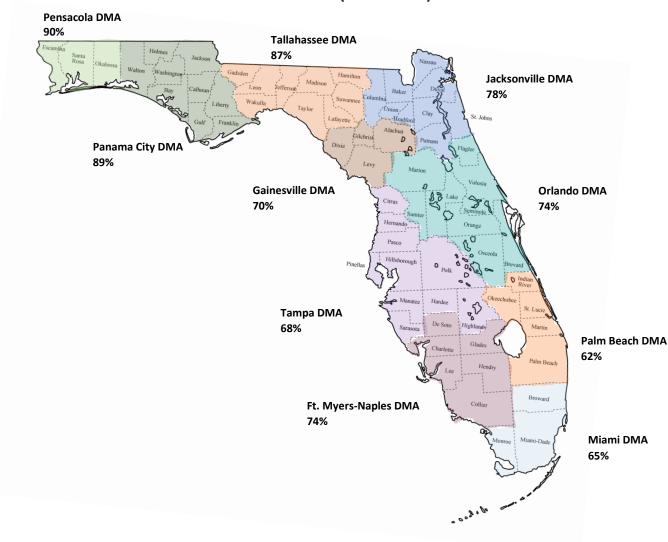

AGES 4-5
CHILD RESTRAINT USE BY DESIGNATED MARKET AREA (DMA)
FIVE YEAR AVERAGE (2020-2024)

Ages 6-12; Restraint Use by DMA

The next figure shows the usage rate for children ages 6-12 by DMA, once again using five years of data (2020–2024). Most of the passengers in this age group were observed out of child restraint devices and were observed either belted or not. Though more half still ride in the rear, many more of the passengers in this age group, compared to younger passengers, were observed riding in the front seat. Restraint usage for passengers ages 6-12 ranged from 62 percent to 90 percent across the ten DMAs. In this instance, the wide range in usage cannot be explained by low observation volume and is more likely due to area differences. Usage levels attained 90 percent in only one DMA (Pensacola), and only two DMAs had usage between 80 and 89 percent (Panama City and Tallahassee). Usage was between 70 percent to 79 in three DMAs (Fort Myers–Naples, Gainesville, and Orlando). Usage was below 70 percent in three DMAs (Miami, Palm Beach and Tampa).
